    L = u_0 * vh * ufl.dx

    A, b = dl.assemble_system(a, L)

        accuracy = dl.assemble(ufl.sqrt(ufl.inner((uh - u_0), (uh - u_0))) * ufl.dx)

TN, $\beta = 1.0e - 06$

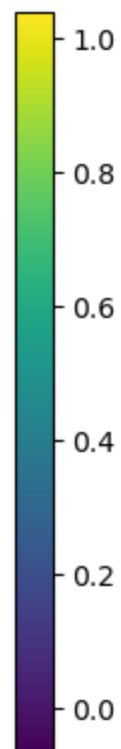

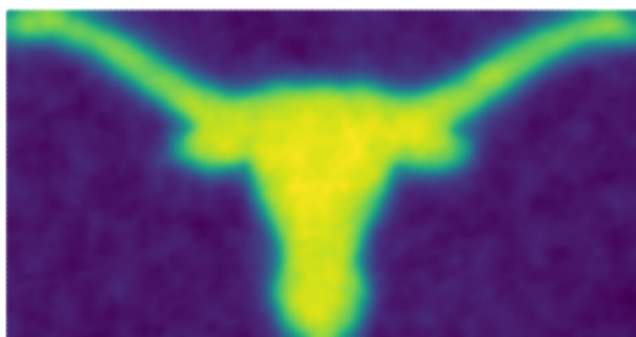

TN, $\beta = 1.0e - 05$

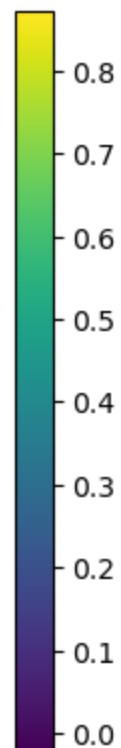

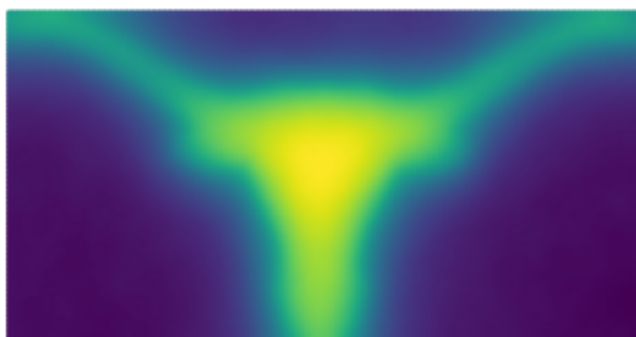

TN, $\beta = 1.0e - 04$

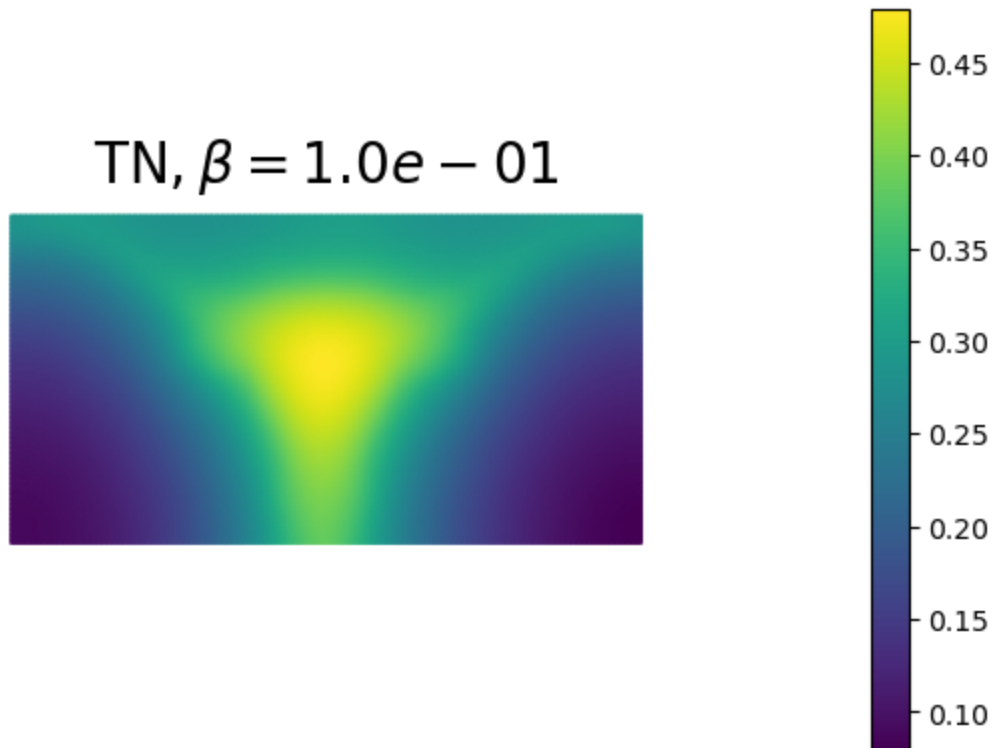

TN, $\beta = 1.0e - 03$

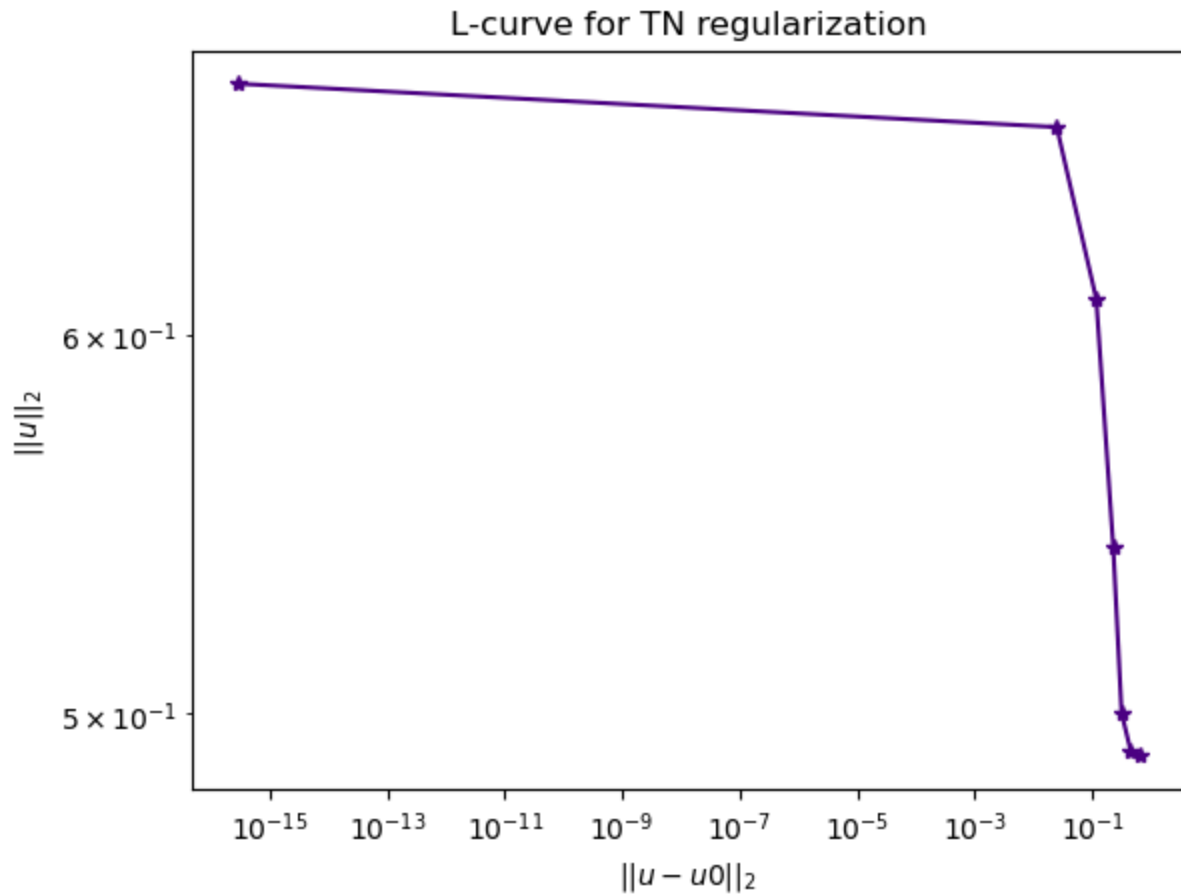

TN, $\beta = 1.0e - 02$

Visually, a regularizer of $\beta \approx 1.0 * 10^{-3}$ seems ideal. For verification, we use the L-curve criterion.

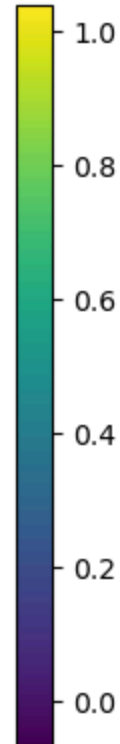

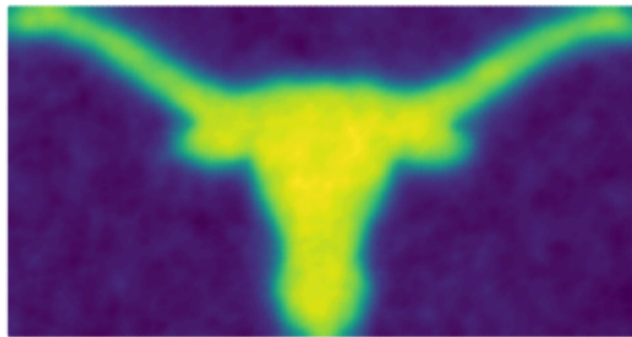

```
In [5]: plt.plot(TN_diffs, TN_mag, "*-", color = "indigo")
plt.title("L-curve for TN regularization")
plt.xlabel("$\\|u - u_0\\|_{2}$")
plt.ylabel("$\\|u\\|_{2}$")
plt.xscale("log")
plt.yscale("log")
plt.show()
```

The L-curve method also seems to suggest a β between 10^{-2} and 10^{-3} as the ideal regularization; with visual comparison, we choose $\beta \approx 10^{-3}$ to be optimal. The best reconstruction with Tikhonov Regularization is shown below:

```
In [6]: linear_solve_plot(title = r"Tikhanov Regularized, $\beta = 10^{-3}$")
```

Tikhanov Regularized, $\beta = 10^{-3}$

Out[6]: Coefficient(FunctionSpace(Mesh(VectorElement(FiniteElement('Lagrange', triangle, 1), dim=2), 0), FiniteElement('Lagrange', triangle, 1)), 146)

Note: to choose optimal delta, I plot different beta and delta combinations. Written analysis can be found on page 425/806.
 For the second part, choosing optimal beta, once delta is set, the written analysis is on page 452/806.
 Finally, for the analysis of the nonlinear iterations based on variation of delta, please view pge 806/806.
 My apologies for the long scrolling.

TV, $\delta = 0.0001, \beta = 1.0e - 01$

L-curve for TV regularization, $\delta = 0.0001$

Per the different delta values and beta values, the optimal delta seems to be 10^{-2} , where the value of the cost functional (after convergence) is small (compared to other larger delta values), while still having a reasonable number of nonlinear iterations. As delta decreases we notice that number of iterations for convergence increases (explained further below) while

the objective error decreases; so, we pick a relatively small delta while still having a reasonable number of iterations for convergence. Note that for a harder problem, this many trials for delta and beta would be excessive and impractical due to the large runtimes.

With $\delta = 10^{-2}$, we identify the optimal β value, now.

The optimal beta-delta combination (at least for $\delta = 10^{-2}$) is $\beta = 10^{-2}$.

To check how the number of nonlinear newton iterations changes with delta:

```

In [10]: def nonlinear_it_count(delta):
    u = dl.Function(V)
    u_hat = dl.TestFunction(V)
    u_tilde = dl.TrialFunction(V)

    beta = dl.Constant(10**-2)
    E = (1/2 * dl.inner(u-u_0, u-u_0) + beta * (ufl.inner(ufl.grad(u), ufl.grad(u)

    grad = dl.derivative(E, u, u_hat)
    H = dl.derivative(grad, u, u_tilde)

    solver.solve(E, u, grad, H)

    return u, solver.it

nliters = []
deltas = np.logspace(1, -4, 6)
for delta in deltas:
    print(delta)
    _, nliter= nonlinear_it_count(delta = dl.Constant(delta))
    nliters+= [nliter]

plt.plot(deltas, nliters, "*-", color = "indigo")

Norm of the gradient less than tolerance

Inexact Newton CG converged in 7812 nonlinear iterations and 23015 linear iterations.

Final norm of the gradient 4.602731580584968e-08

Value of the cost functional 0.07483092220243426

As δ decreases, the number of nonlinear iterations required for convergence increases. This is because the hessian for the newton step becomes increasingly illconditioned; as δ tends to 0, the functional R_{TV}^δ becomes non-differentiable when $\nabla u = 0$ (smooth color in sections of the image). As shown in 1b and 1c, the denominator of the first variation of R_{TV}^δ , $(\nabla u \cdot \nabla u + \delta)^{\frac{1}{2}}$, approaches 0; we know this constant will transfer over to the 2nd variation of R_{TV}^δ , where the hessian entries grow very large in magnitude and become very sensitive to changes in u (thus the hessian is ill conditioned). As the hessian becomes increasingly ill conditioned, the number of nonlinear newton steps for convergence, thus, also increases.
